

# Designing Interactive Reports in Power BI Desktop

# Agenda

- Designing Interactive Reports
- Creating the Top 5 Products List
- Working with Bookmarks and Drillthrough
- Using Report Themes
- Importing Custom Visuals
- Publishing Power BI Reports

# Creating Reports

- Power BI Desktop project contains one report
  - Report within project can contain multiple pages
  - Report pages contains visuals
- Reports can be created using filters
  - You can add filter to a specific visual
  - You can add page-level filters
  - You can add report-level filters
  - You can add interactive filters

# Built-in Visualization Types

- Table and Matrix
- Bar charts and Column charts
- Pie charts and Doughnut chart
- Line chart and Area chart
- Scatter chart and Combo charts
- Card and Multi-row Card
- Treemap
- Ribbon chart
- Waterfall chart
- Funnel chart
- Gauge
- Map and Filled Map
- Slicer
- R script visual
- Shape map (in preview)

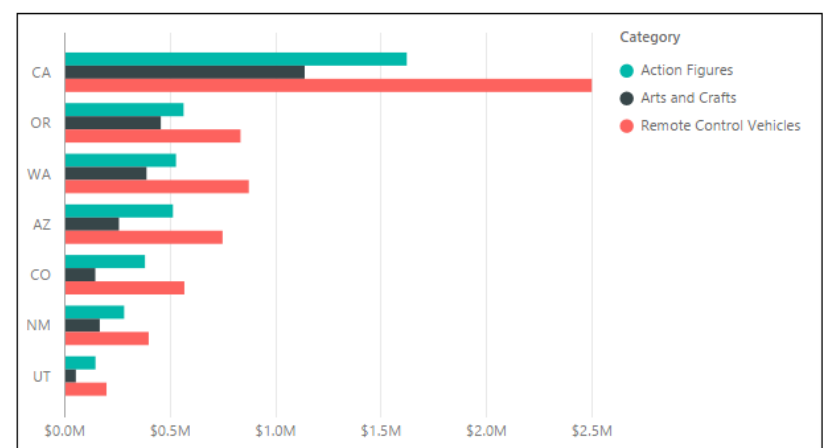

# Column Chart and Bar Chart Variations

- Stacked Column Chart and Clustered Column Chart

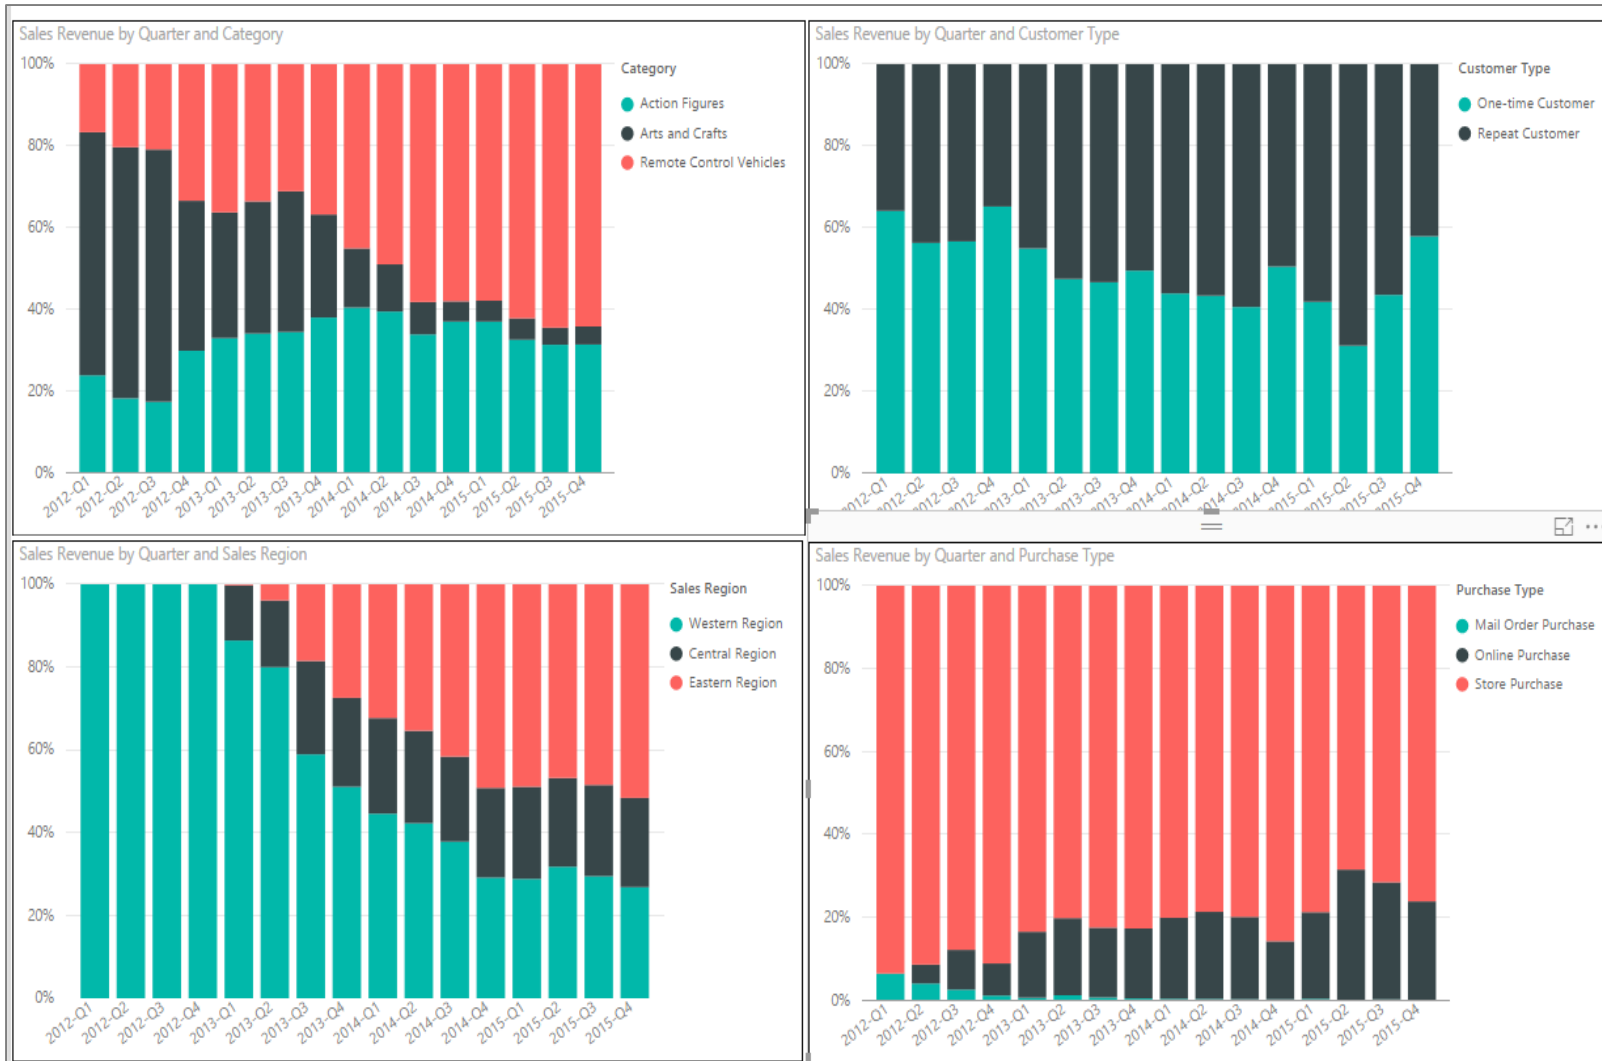

- Stacked Bar Chart and Clustered Bar Chart

# 100% Stacked Column Chart

- Used to visual distribution over time across categories

# Line Charts

- Visualizes a series of data points across X and Y axis
  - Commonly used for time-based analysis

- Add field to Legend to create multiple lines for comparative analysis

# Trend Lines

- Used to visualize trends in series-based data
  - Flattens out the ups and downs
  - Used to determine if values are trending up or down

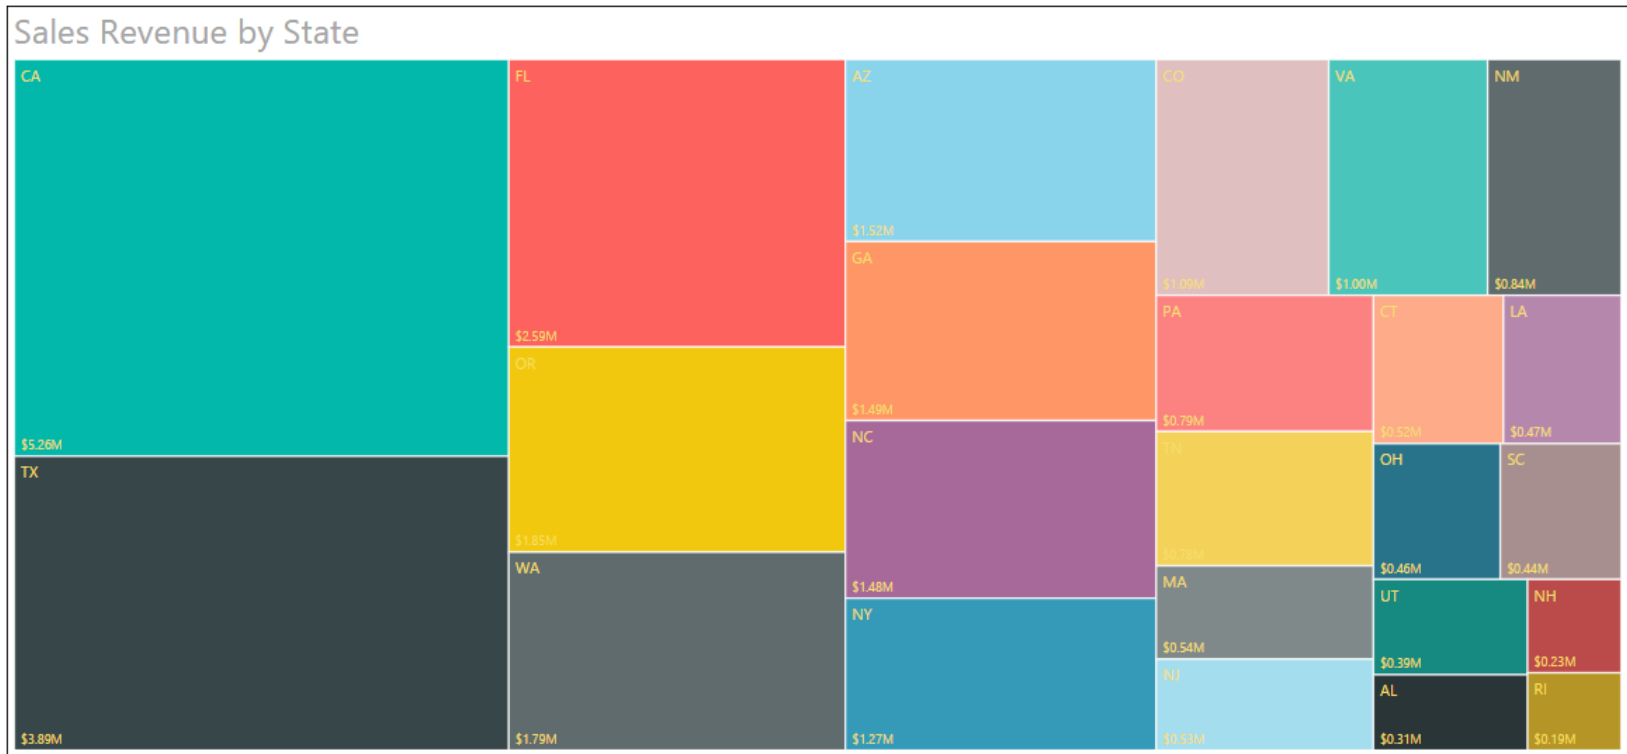

# Stacked Area Chart

- Basically, a line chart with a little more personality
  - Areas under lines filled with colors

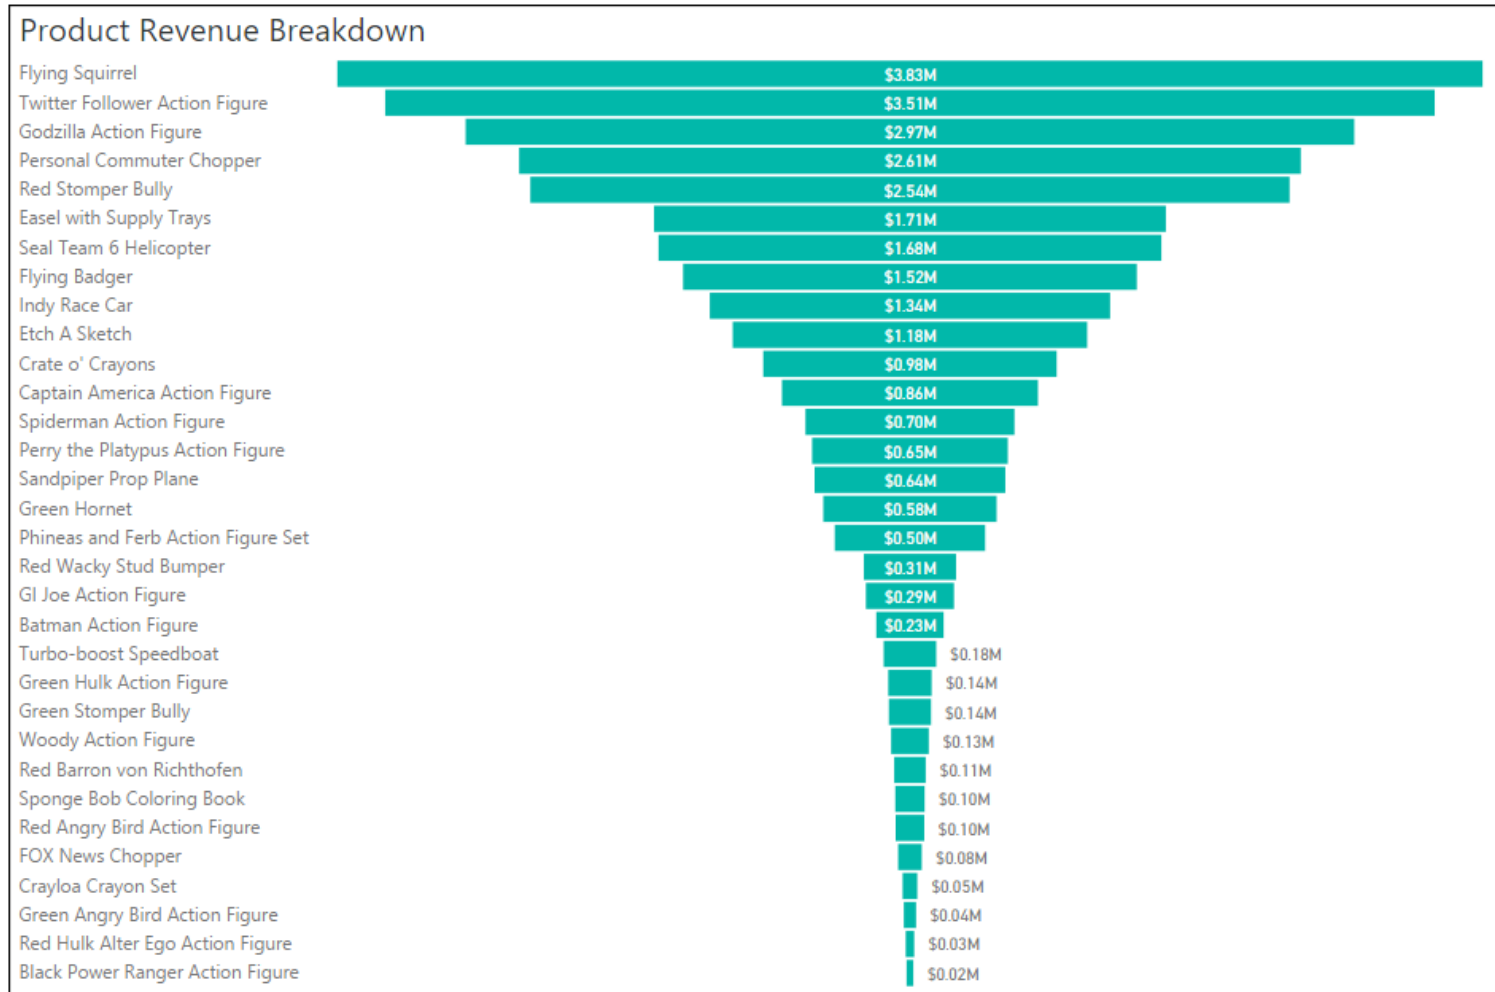

# Treemap

- Simple visualization of category distribution

# Funnel

- Visualizes distribution across categories as percentage of top value

# Waterfall

- Visualizes series-based data with positive and negative values

# Scatter Chart

- Visualizes set of data points when looking for correlation
  - Scatter chart used to discover correlation between two variables
  - Each data point has two values which are mapped to X and Y axis

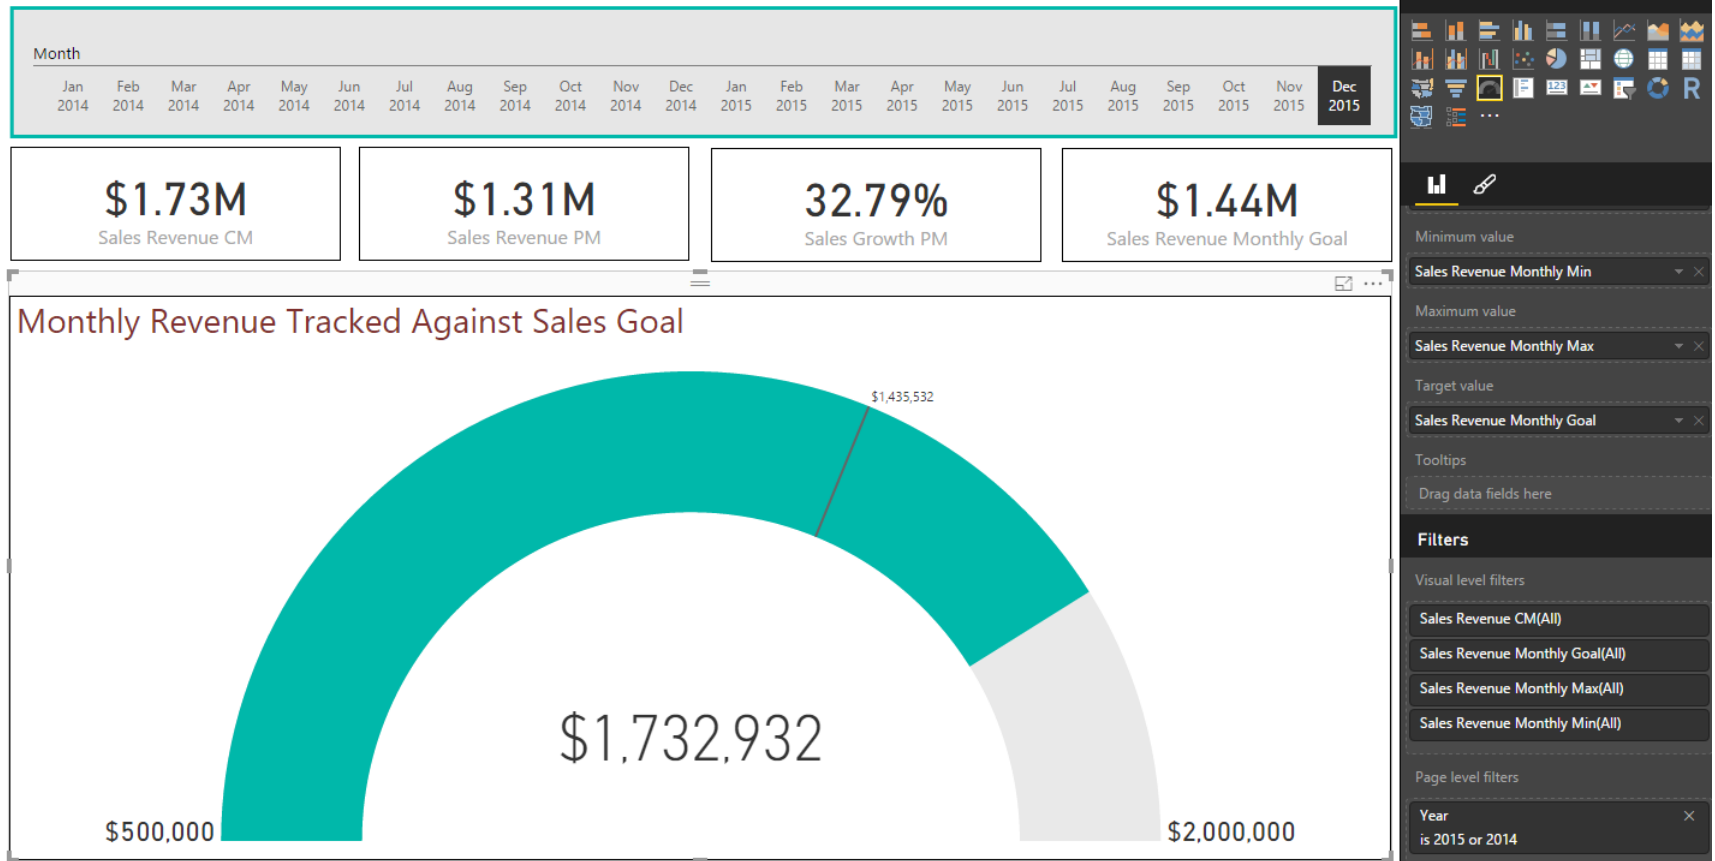

se price?

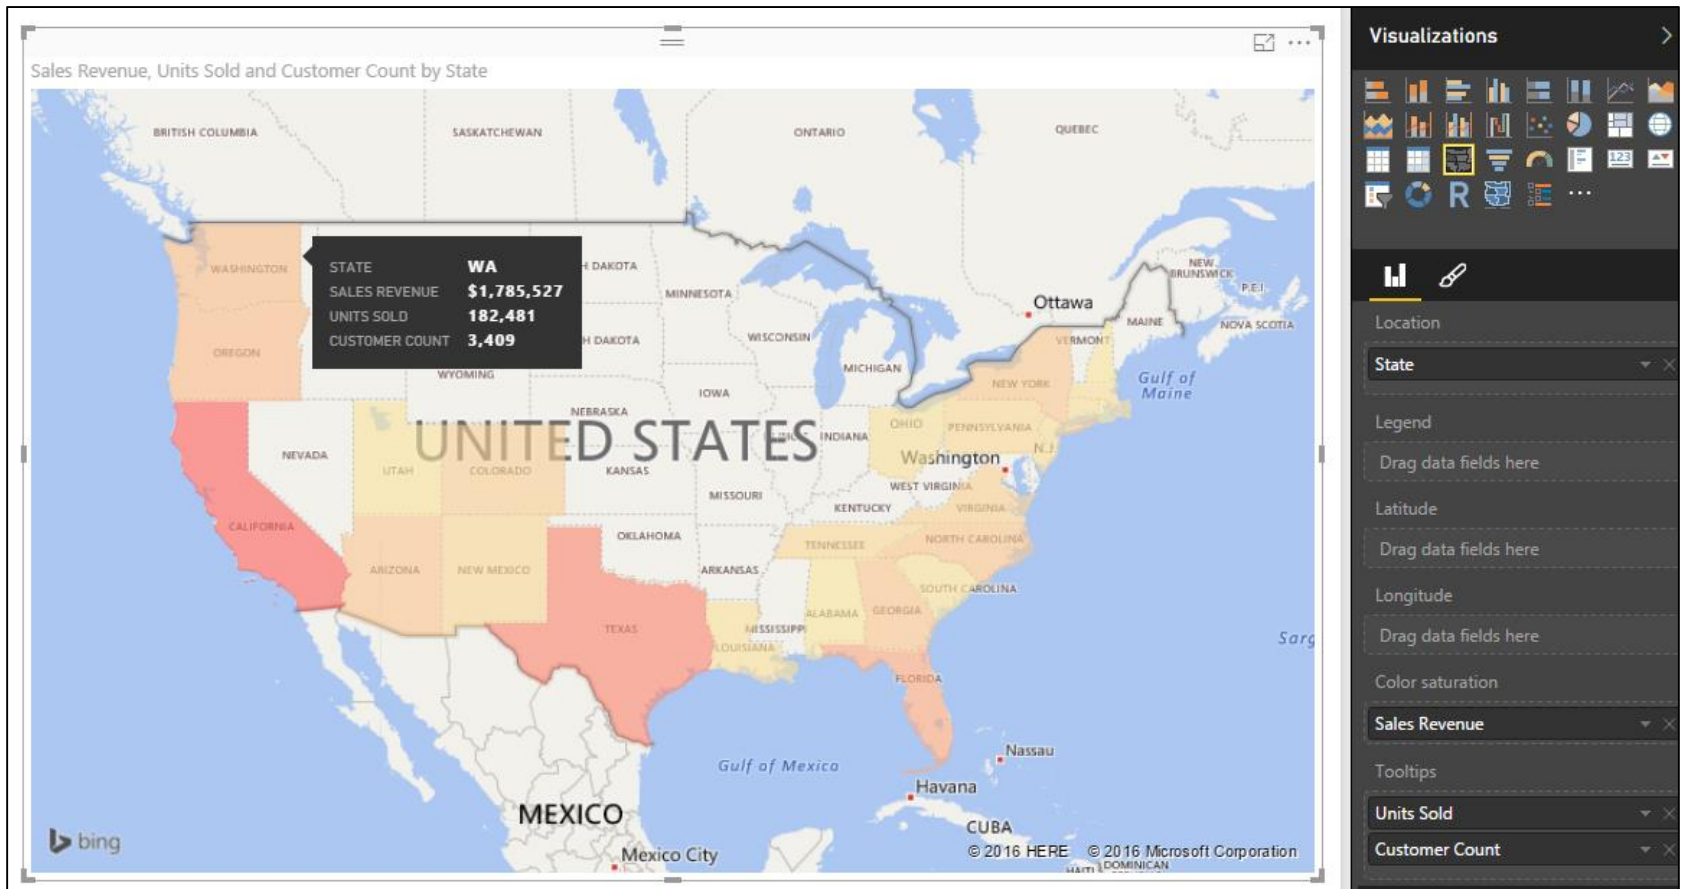

# Gauge Visual

- Visualizes how measured value is tracking against goal or budget

# Filled Map

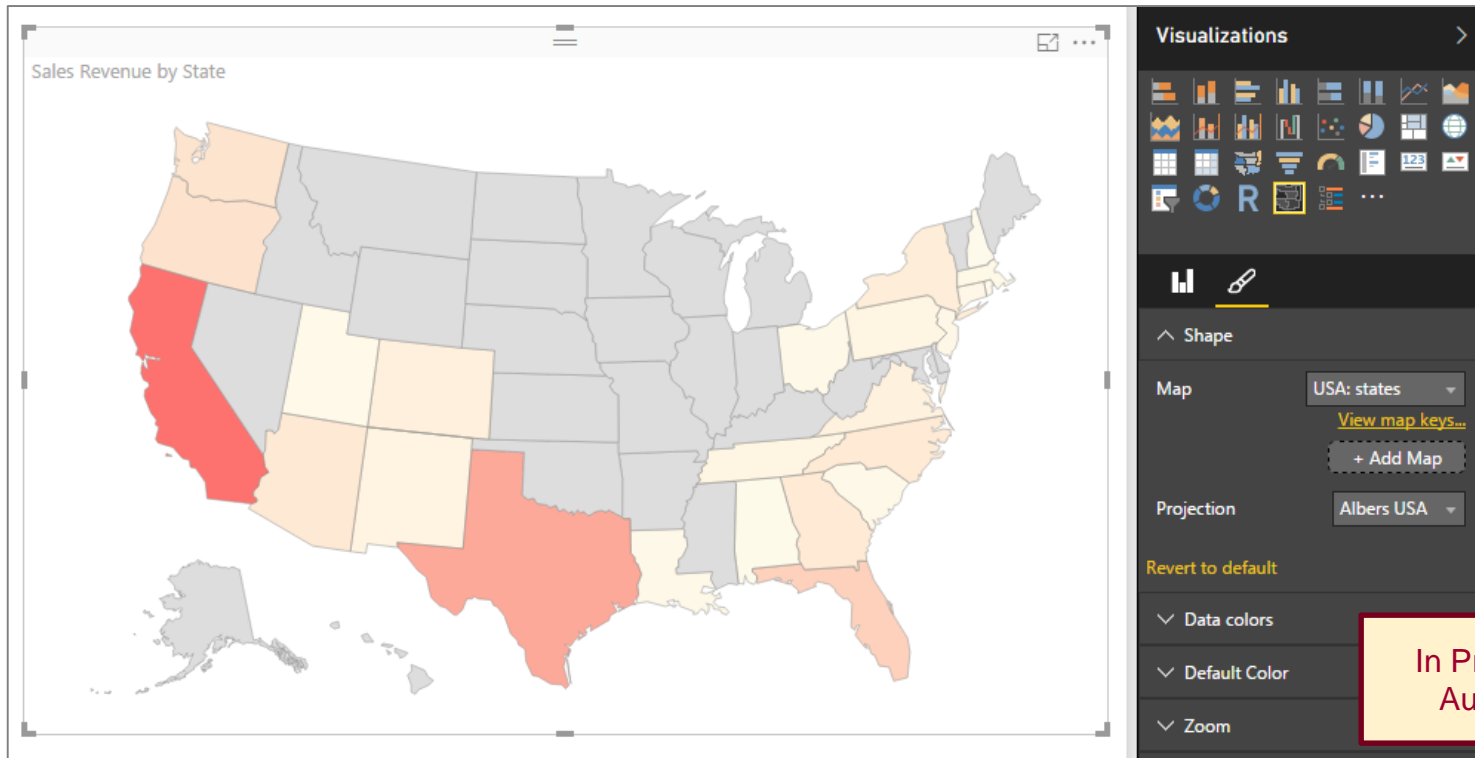

- Visualizes distribution across states and countries

# Inline Shape Map

- Similar to filled map with a few important exceptions
  - Based on **TopoJSON** map format created by ESRI
  - Allows for creation of custom maps using JSON
  - Create maps for geography, seating arrangements, floor plans, etc.

**DEMO**

# Exploring Power BI Visuals

# User Interaction with Slicers & Highlighting

- Provides user with interactive filtering control

# User Interaction using Drill Actions

- Drill Actions supported when using hierarchies
  - You must enable drilldown mode in visual

# Agenda

- ✓ Designing Interactive Reports
- Creating the Top 5 Products List
  - Working with Bookmarks and Drillthrough
  - Using Report Themes
  - Importing Custom Visuals
  - Publishing Power BI Reports

# Ranking Products By Sales using RANKX

- DAX provides RANKX function for ranking
  - Can be used to track top 5 products by sales revenue

```
Product Rank =  
RANKX(  
    ALL(Products),  
    CALCULATE( SUM(Sales[SalesAmount]) )  
)
```

- You can sort and filter on output of RANKX function

Product Rank ▲	Product	Sales Revenue
1	Flying Squirrel	\$3,828,783
2	Twitter Follower Action Figure	\$3,508,806
3	Godzilla Action Figure	\$2,970,735
4	Personal Commuter Chopper	\$2,613,193
5	Red Stomper Bully	\$2,538,233

Product Rank ▲

is less than or equal to...

Show items when the value:

is less than or equal to ▼

5

☒ And ☐ Or

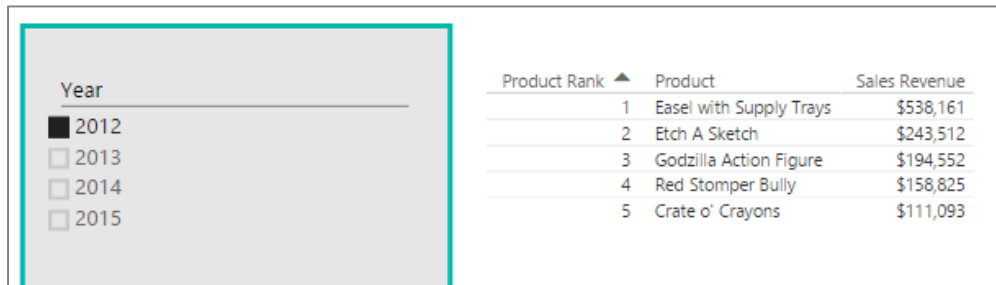

▼

Apply filter

# Problems with the Filter Context

- RANKX function is affected by filter context
  - Sometimes you get the results you are expecting

The screenshot shows a filter pane on the left with the 'Year' filter set to 2012. The main table displays the top 5 products by sales revenue for that year.

Product Rank	Product	Sales Revenue
1	Easel with Supply Trays	\$538,161
2	Etch A Sketch	\$243,512
3	Godzilla Action Figure	\$194,552
4	Red Stomper Bully	\$158,825
5	Crate o' Crayons	\$111,093

- Sometimes you might get unexpected results

The screenshot shows a filter pane on the left with 'Year' set to 2012 and 'Category' set to Action Figures. The main table displays the top 3 products by sales revenue within that category and year.

Product Rank	Product	Sales Revenue
2	Twitter Follower Action Figure	\$3,508,806
3	Godzilla Action Figure	\$2,970,735

# Writing Context Aware DAX Code

- When using RANKX...
  - It's recommended to call **HASONEVALUE** function
  - When calling ALL function, pass one or more columns

```
Product Rank =  
IF(  
    HASONEVALUE(Products[Product]),  
    RANKX(  
        ALL( Products[Subcategory], Products[Product] ),  
        CALCULATE( SUM(Sales[SalesAmount]) )  
    )  
)
```

- Ranking function now evaluates product ranking for specific Category

Product Rank	Product	Sales Revenue
1	Twitter Follower Action Figure	\$3,508,806
2	Godzilla Action Figure	\$2,970,735
3	Captain America Action Figure	\$855,607
4	Spiderman Action Figure	\$698,614
5	Perry the Platypus Action Figure	\$654,110

# More Ranking Evaluation Problems

- Adding new column to table creates new problem
  - Ranking run separately for each separate Product Image
  - Every product has unique Product Image and is given rank of 1

Product Rank	Product	Product Image	Sales Revenue
1	Batman Action Figure		\$40,395
1	Black Power Ranger Action Figure		\$4,223
1	Captain America Action Figure		\$125,110
1	Crate o' Crayons		\$322,711
1	Crayloa Crayon Set		\$12,868
1	Easel with Supply Trays		\$928,620
1	Etch A Sketch		\$293,175

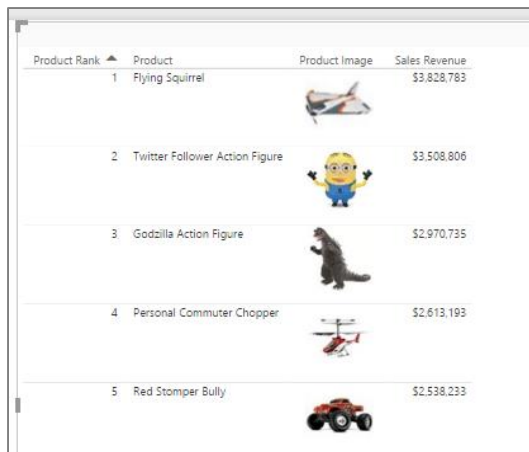

# Getting It Right

- Call to RANKX must be modified again
  - You must specify which columns to factor into ranking

```
Product Rank =  
IF(  
    HASONEVALUE(Products[Product]),  
    RANKX(  
        ALL( Products[Subcategory], Products[Product], Products[Product Image] ),  
        CALCULATE( SUM(Sales[SalesAmount]) )  
    )  
)
```

- Context-aware DAX code corrects problems with visual

A screenshot of a Power BI table visual displaying a ranked list of products. The table has four columns: 'Product Rank' (with a sort arrow), 'Product', 'Product Image', and 'Sales Revenue'. The data is sorted by rank, showing the top five products. Each row includes a small image of the product.

Product Rank	Product	Product Image	Sales Revenue
1	Flying Squirrel		\$3,828,783
2	Twitter Follower Action Figure		\$3,508,806
3	Godzilla Action Figure		\$2,970,735
4	Personal Commuter Chopper		\$2,613,193
5	Red Stomper Bully		\$2,538,233

## Holiday Season Data Analysis

Daily Sales in Q4 of 2012

Daily Sales in Q4 of 2013

Daily Sales in Q4 of 2014

Daily Sales in Q4 of 2015

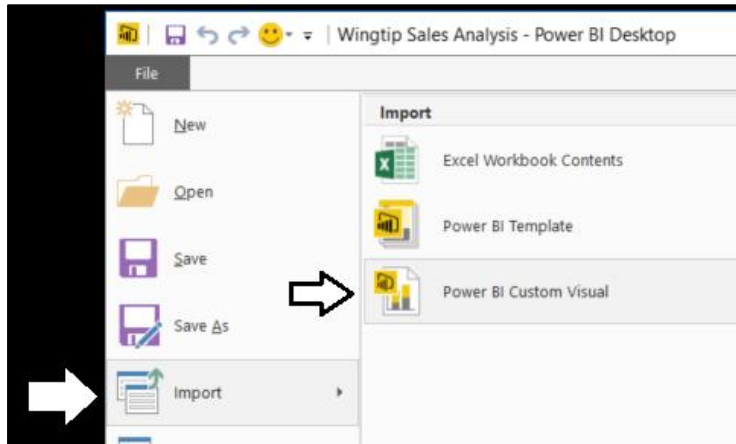

# Hierarchy Slicer

## ■ Custom Visual Example 4

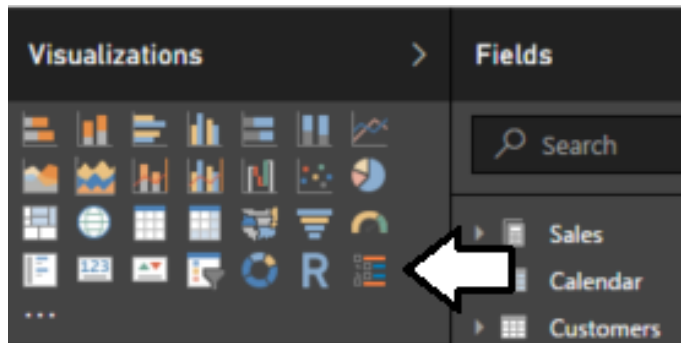

# Importing a Custom Visual

- Import custom visual into Power BI Desktop project
  - Execute **Import > Power BI Custom Visual** menu command

- After import, Custom Visual appears in **Visualizations** list

# Agenda

- ✓ Designing Interactive Reports

- ✓ Working with Bookmarks and Drillthrough
- ✓ Importing Custom Visuals
- Publishing Power BI Reports

# Publishing a Power BI Desktop Project

- Power BI Desktop provides **Publish** command
  - Used to publish project to Power BI service

- Requires logging into your Office 365 account

- Published articles added to a specific workspace

# Examining What's Been Published

- What does project publishing add to workspace?
  - One dataset with same name as project
  - One report with same name as project

# Dataset Configuration

- You can configure Dataset after its been published
  - Configure data source credentials
  - Configure refresh schedule
  - Configure Row-level Security

# Publish to Web

- **Publish to Web** command available on reports
  - Not supported for reports and datasets which implement RLS

- **Publish to Web** command used to generate embed codes

# Generating Embed Codes

- Used to provide anonymous access to report
  - Provide link which can be posted, emailed or texted
  - Provides **iFrame** HTML element for embedding in public web site
