

# Integrating Excel Workbooks into Power BI

# Agenda

- Understanding Excel Integration with Power BI
- Designing Data Models in Microsoft Excel
- Connecting to Excel Data Models from Power BI
- Importing Data Models into Power BI Desktop
- Using the Power BI Publishing for Excel Add-in
- Connecting from Excel to a Power BI Dataset

# Microsoft Excel Integration with Power BI

- Excel can be used as a query and data modeling tool
  - Excel provides Power Query and PowerPivot
  - Similar query and data modeling features to Power BI Desktop
  - Power BI can connect to an Excel data model
  - Excel data model can be imported into Power BI Desktop project
- Excel as a tool to publish worksheet content to Power BI
  - Excel worksheets can be rendered inside Power BI workspace
  - Provides best way to create PivotTables in Power BI custom solution
  - **Power BI publisher for Excel** add-in allows publishing to dashboard
- Analyze in Excel Feature
  - Makes it possible to connect Excel workbook to Power BI Dataset
  - Create PivotTables to analyze datasets running in Power BI service

# Excel Online Integration with Power BI

- Excel Online used to render Excel workbooks in browser
  - Workbooks in OneDrive & SharePoint can be accessed thru browser
  - Excel Online rendering service can be hosted inside Power BI report

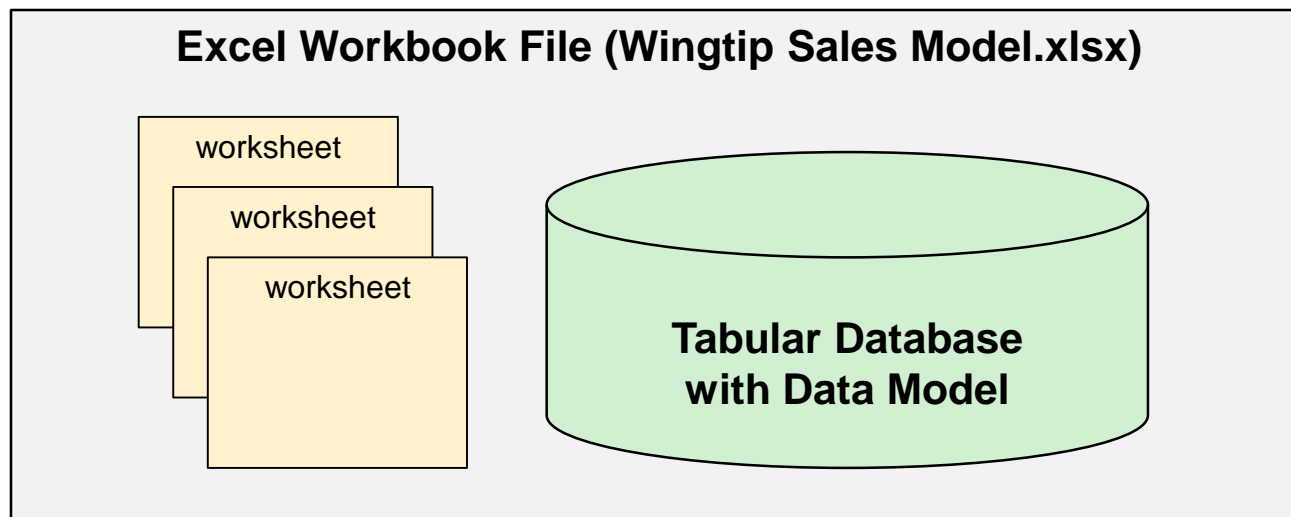

# Agenda

- ✓ Understanding Excel Integration with Power BI
- Designing Data Models in Microsoft Excel
  - Connecting to Excel Data Models from Power BI
  - Importing Data Models into Power BI Desktop
  - Using the Power BI Publishing for Excel Add-in
  - Connecting from Excel to a Power BI Dataset

# The Excel Data Model

- Every Excel workbook file contains a data model
  - Data model stored as tabular database inside XLSX file
  - Based on **xVelocity** database engine just like PBIDT and SSAS
- When importing data with from an Excel query...
  - You can add the imported data as a table in a worksheet
  - You can add the imported data as a table in the data model

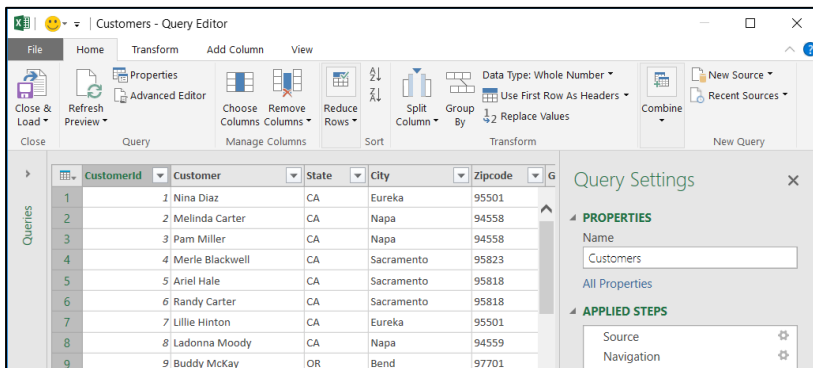

# Working with Query Tools in Microsoft Excel

- Microsoft Excel provides query tools similar to PBIDT
  - Included with Excel 2013/2010 using Power Query add-in
  - Included natively in Excel 2016 – Power Query add-in retired
  - Query functionality provided in Query tab in ribbon

- Excel queries are edited in separate Query Editor window

# Working with the Power Pivot Add-in

- Data Modeling requires activation of Power Pivot add-in
  - Not activated by default in Excel 2016 or Excel 2013
  - Not activated nor even installed by default in Excel 2010

- Once activated, new **Power Pivot** tab appears in ribbon

# Building Data Models in Excel Workbooks

- You create data model just like in Power BI Desktop
  - Convert column types and format column values
  - Add calculated columns using DAX expressions
  - Add measures using DAX expressions
  - Add a calendar table to support DAX time intelligence
  - Add dimensional hierarchies
- Excel data model supports adding KPIs
  - Power BI Desktop does not provide equivalent feature

# Using Power Pivot Add-in for Excel

Power Pivot for Excel - Wingtip Sales Model 1.xlsx

# Adding Hierarchies to an Excel Data Model

- Excel data model supports dimensional hierarchies
  - All column in a hierarchy must be from single table
  - Provides the same effect as dimensional hierarchies in PBIDT
  - Technique for creating hierarchies in Excel different from PBIDT

# Creating PivotTables from Excel Data Model

- Excel allows creation of PivotTables from data model
  - PivotTables are very popular with business users and data analysts
  - PivotTable allows user-friendly drilldown during data analysis
  - Excel PivotTables can be published to Excel Online
  - Power BI currently offers no visualization that matches Excel PivotTable

# Creating a Chart from an Excel Data Model

- Excel provides rich charting capabilities
  - Excel charts can also be published to Excel Online

# KPIs in an Excel Data Model

- Excel supports adding KPIs to data model
  - KPI created as visual layer on top of a measure
  - Power BI Desktop has no equivalent KPI support
  - Excel KPI can be used in Excel PivotTable

Key Performance Indicator (KPI)

☒ Calendar

☐ Calendar Drilldown

- KPI from Excel data model can be used in Power BI report

# Power View Reports in Excel

- Excel 2013 supports creating reports with Power View
  - Power View is reporting layer on top of Excel data model
  - Power View report added as worksheet within workbook file

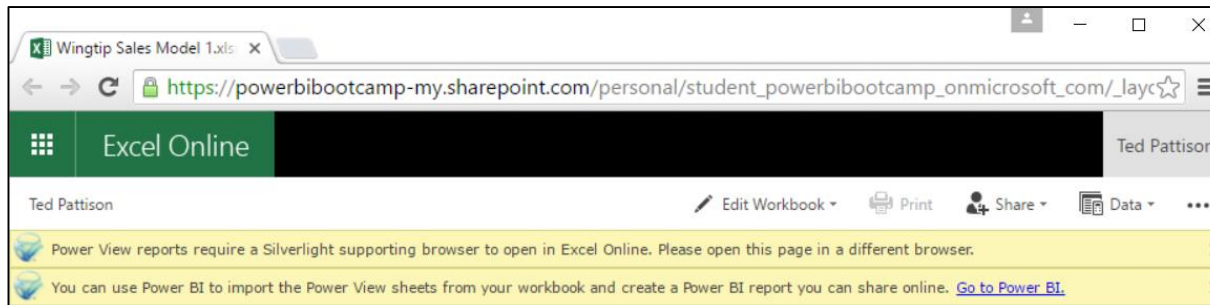

# Power View Requires Silverlight

- Use of Power View requires Microsoft Silverlight
  - Required when using Power View in Excel and in Browser
  - Often requires user to install Silverlight

- Silverlight dependencies considered undesirable
  - Power View reports inaccessible to many browsers and mobile devices
  - Microsoft is currently trying to move away from using Silverlight

**DEMO**

## **Working with Query and Data Modeling Features in Microsoft Excel**

# Agenda

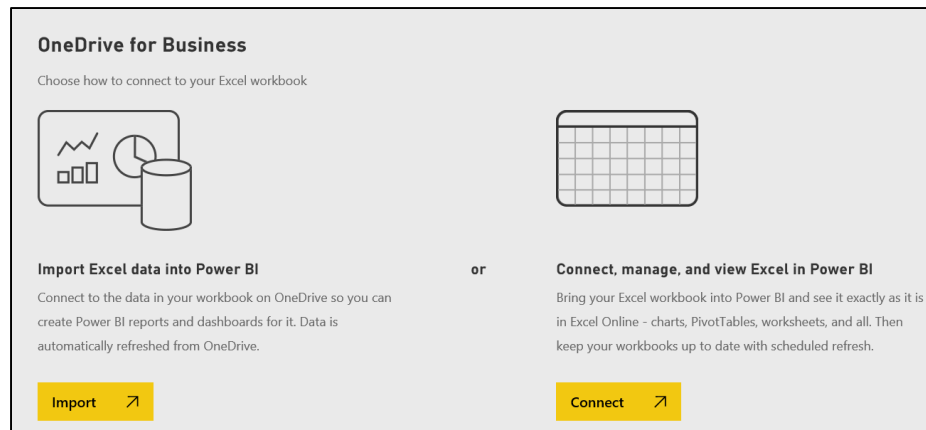

- ✓ Understanding Excel Integration with Power BI
- ✓ Designing Data Models in Microsoft Excel
- Connecting to Excel Data Models from Power BI
  - Importing Data Models into Power BI Desktop
  - Using the Power BI Publishing for Excel Add-in
  - Connecting from Excel to a Power BI Dataset

# Connect versus Import

- Connecting to a Workbook from Power BI
  - Data model inside Excel workbook file becomes live source of data
  - Excel Online renders Excel worksheets inside Power BI workspace
  - All visualizations built into Excel workbook preserved "as is"
- Importing a Workbook into Power BI
  - Data model from workbook file is converted into Power BI dataset
  - Power View reports converted to Power BI reports
  - Other visualizations from workbook must be recreated from scratch

# Hosting Excel Online inside Power BI

- What happens when you "Connect To" an Excel workbook?
  - Excel workbook renders inside Power BI using Excel Online hosting
  - Makes it easy to add Excel workbooks into Power BI user experience
  - All visualizations built into workbook as leveraged "as is"
  - Best way to provide true PivotTables in Power BI environment

# "Connecting To" a Power View Report

- When connecting to workbook with Power Reports...
  - Excel Online can render Power View reports in Power BI service
  - Requires a Silverlight-enabled browser – this can be a pain point

**DEMO**

## **Connecting to an Excel Workbook with a Data Model**

# Agenda

- ✓ Understanding Excel Integration with Power BI
- ✓ Designing Data Models in Microsoft Excel
- ✓ Connecting to Excel Data Models from Power BI
- Importing Data Models into Power BI Desktop
  - Using the Power BI Publishing for Excel Add-in
  - Connecting from Excel to a Power BI Dataset

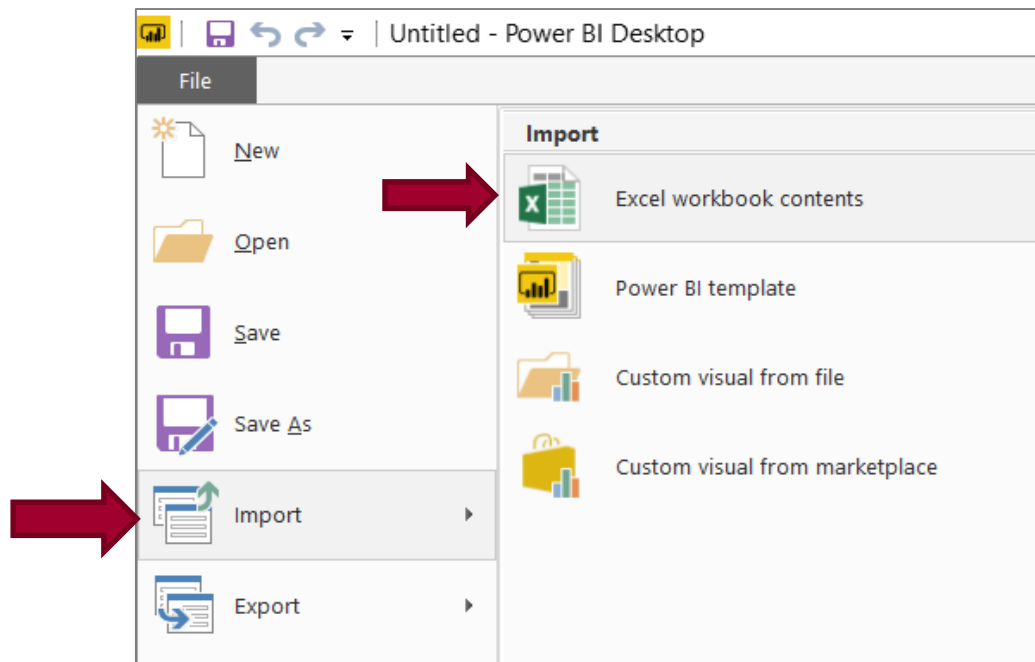

# Importing Excel Data Models into Power BI

- Two way to import Excel Data Model into Power BI
  - Import data model into Power BI service using browser
  - Import data model into new Power BI Desktop project
- Importing data model into Power BI service is limited
  - Power BI imports read-only copy of data model
  - Any modifications to data model must be made through Excel
  - All data refreshing must be accomplished manually through Excel
- Importing data model into Power BI Desktop is better
  - Importing removes dependencies on source Excel workbook
  - Imported dataset can be modified in Power BI Desktop
  - Imported dataset can be configured for server-side refresh

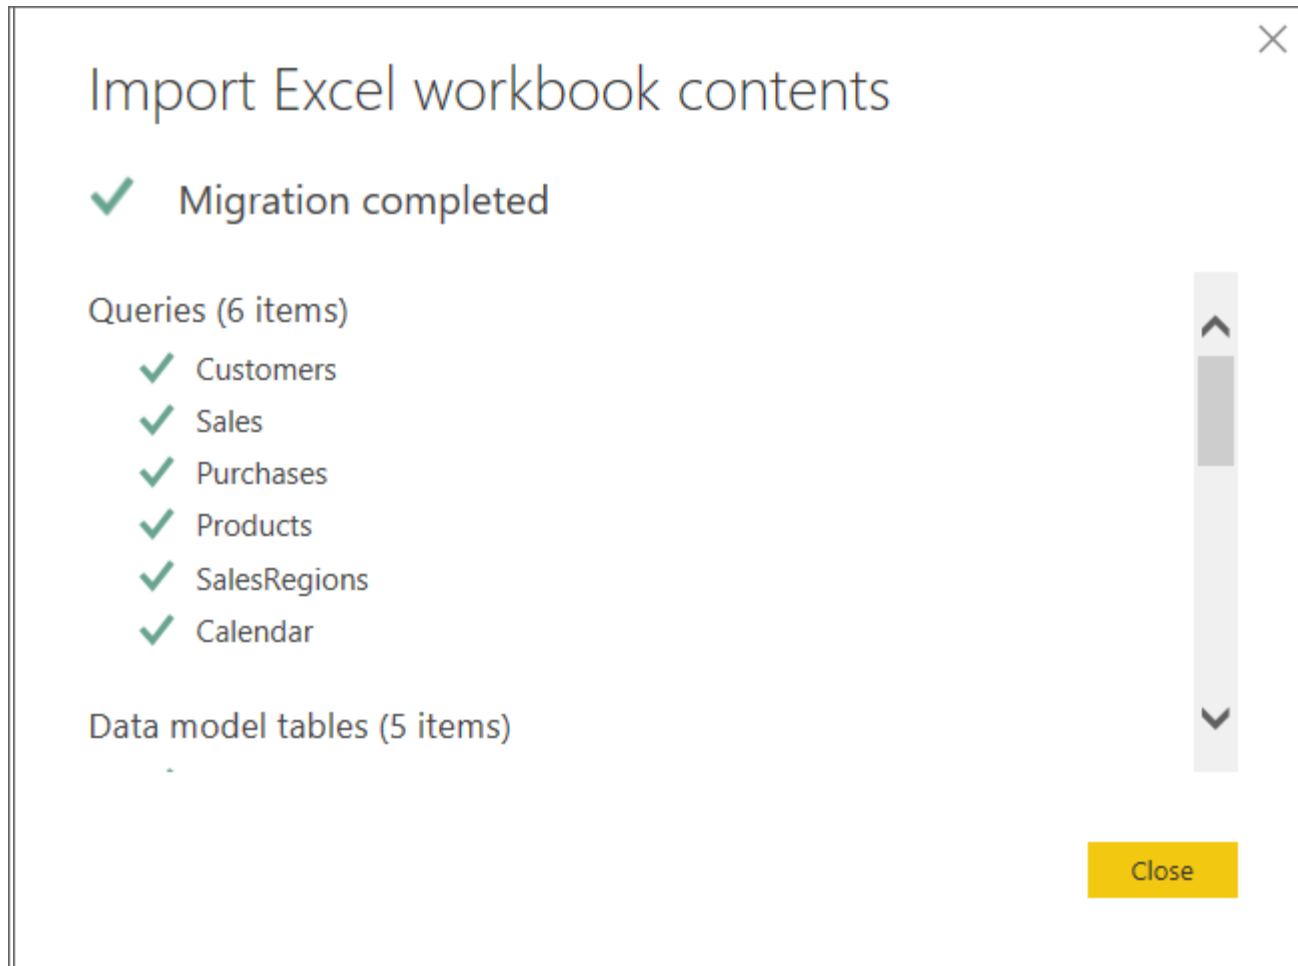

# Importing Data Model into Power BI Desktop

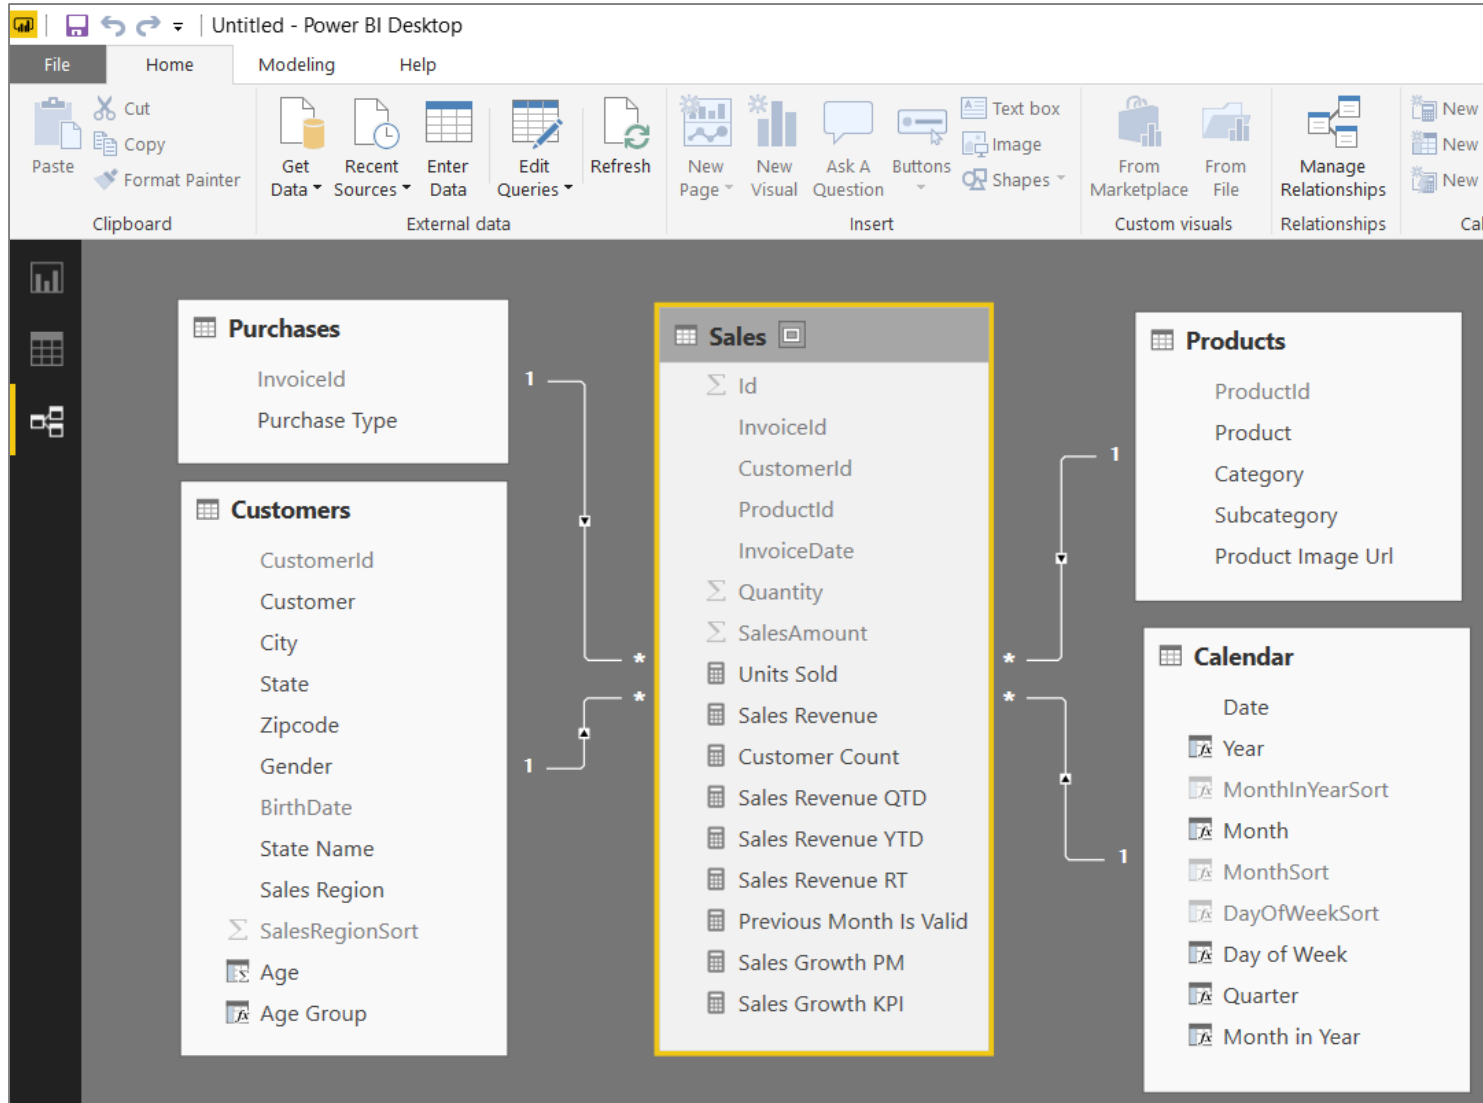

- Data model must be imported into new project
  - Accomplished using **Import > Excel workbook contents**
  - You cannot import a dataset into an existing project

# The Data Model Import Process

# Inspecting the Imported Data Model

# Inspecting the Project Data Sources

# Modifying the Data Model

- DAX code is now editable

The screenshot displays the Microsoft Power BI Desktop application. The top ribbon includes tabs for File, Home, Modeling, and Help. The Modeling tab is active, showing various tools for data manipulation. The main workspace is divided into two sections: a DAX editor on the left and a data table on the right.

**DAX Editor:**

```
Age Group = SWITCH( TRUE(),  
    [Age] >= 65, "Ages 65 and over",  
    [Age] >= 50, "Ages 50 TO 65",  
    [Age] >= 40, "Ages 40 TO 49",  
    [Age] >= 30, "Ages 30 TO 39",  
    [Age] >= 18, "Ages 18 TO 23",  
    [Age] < 18, "Ages under 18"  
)
```

**Data Table:**

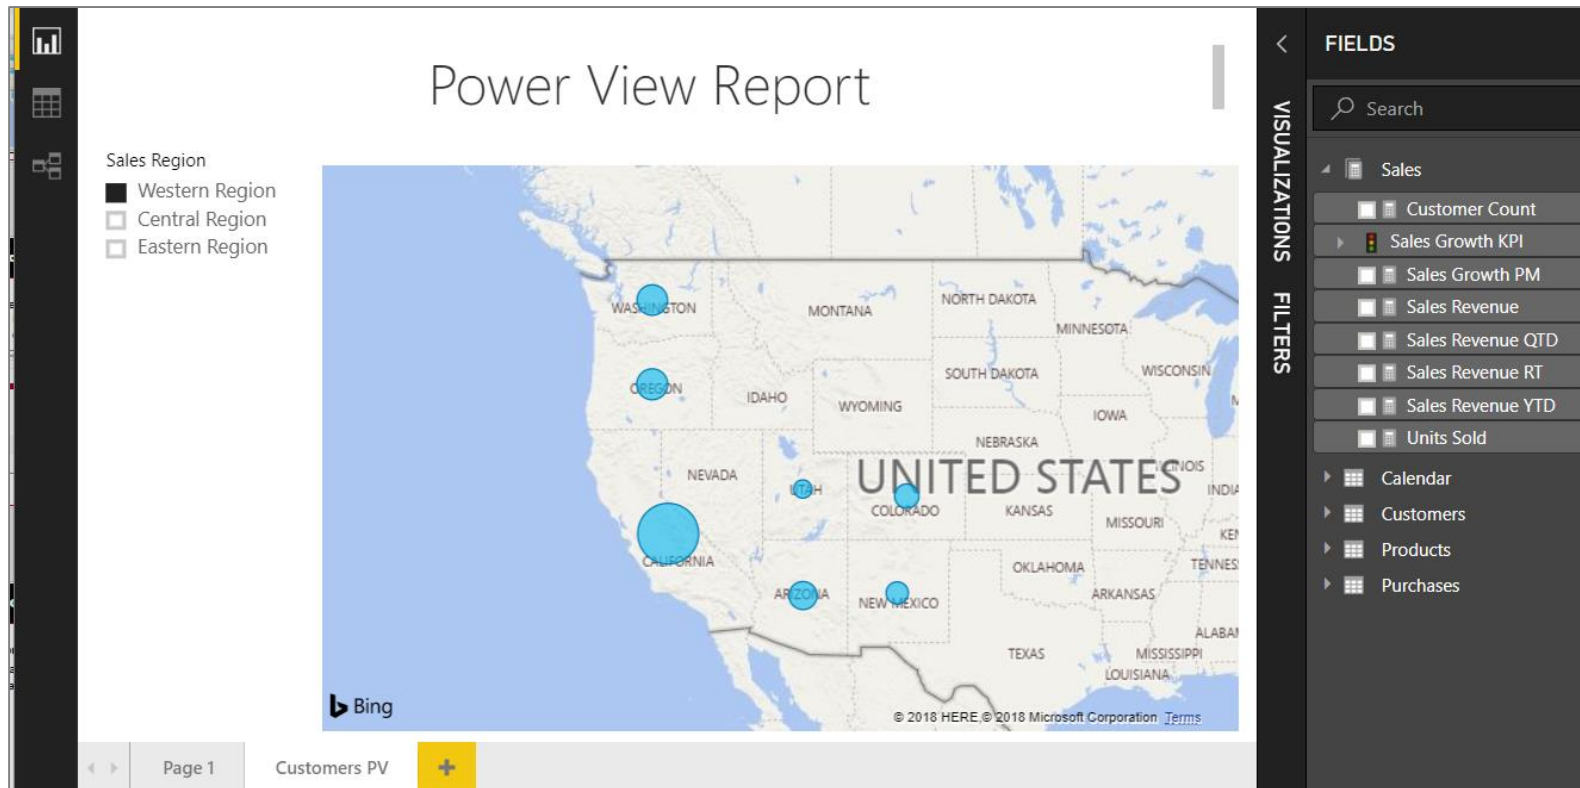

CustomerId	Customer	City	State	Zipcode	Gender	BirthDate	State Name	Sales Region	SalesRegionSort	Age	Age Group
760	Lucile Blake	San Jose	CA	95133	Female	3/16/1968 12:00:00 AM	California	Western Region	1	50	Ages 50 TO 65
881	Rochelle Owen	San Jose	CA	95133	Female	7/19/1942 12:00:00 AM	California	Western Region	1	75	Ages 65 and over
940	Corinne Finch	San Jose	CA	95133	Female	3/7/1943 12:00:00 AM	California	Western Region	1	75	Ages 65 and over
1119	Twila Massey	San Jose	CA	95133	Female	9/3/1990 12:00:00 AM	California	Western Region	1	27	Ages 18 TO 23

# Power View Report Migration

- Power View Reports are migrated to new project
  - Built using standard Power BI visuals (no Silverlight)
  - All other visualizations must be built from scratch ☹️

**DEMO**

# **Importing an Excel Workbook with a Data Model into Power BI Desktop**

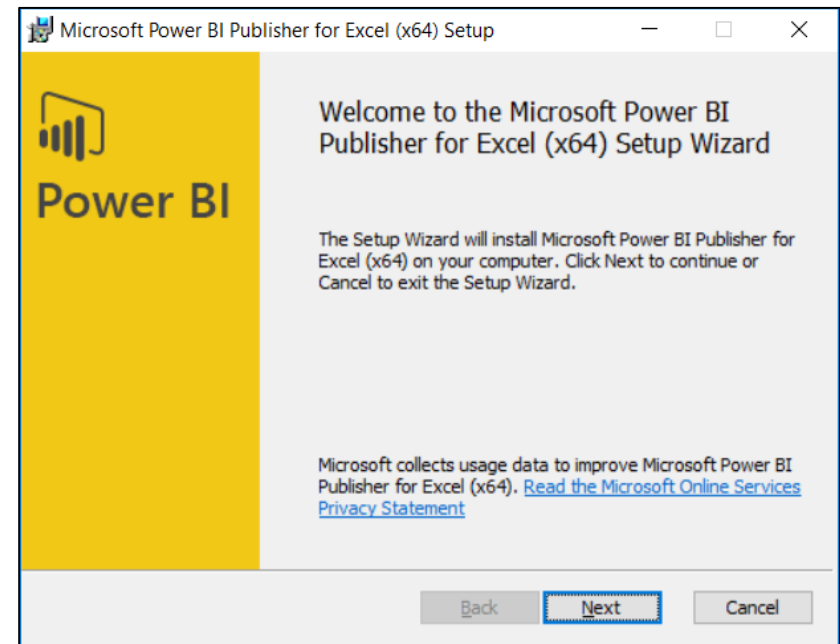

# Agenda

- ✓ Understanding Excel Integration with Power BI
- ✓ Designing Data Models in Microsoft Excel
- ✓ Connecting to Excel Data Models from Power BI
- ✓ Importing Data Models into Power BI Desktop
- Using the Power BI Publishing for Excel Add-in
  - Connecting from Excel to a Power BI Dataset

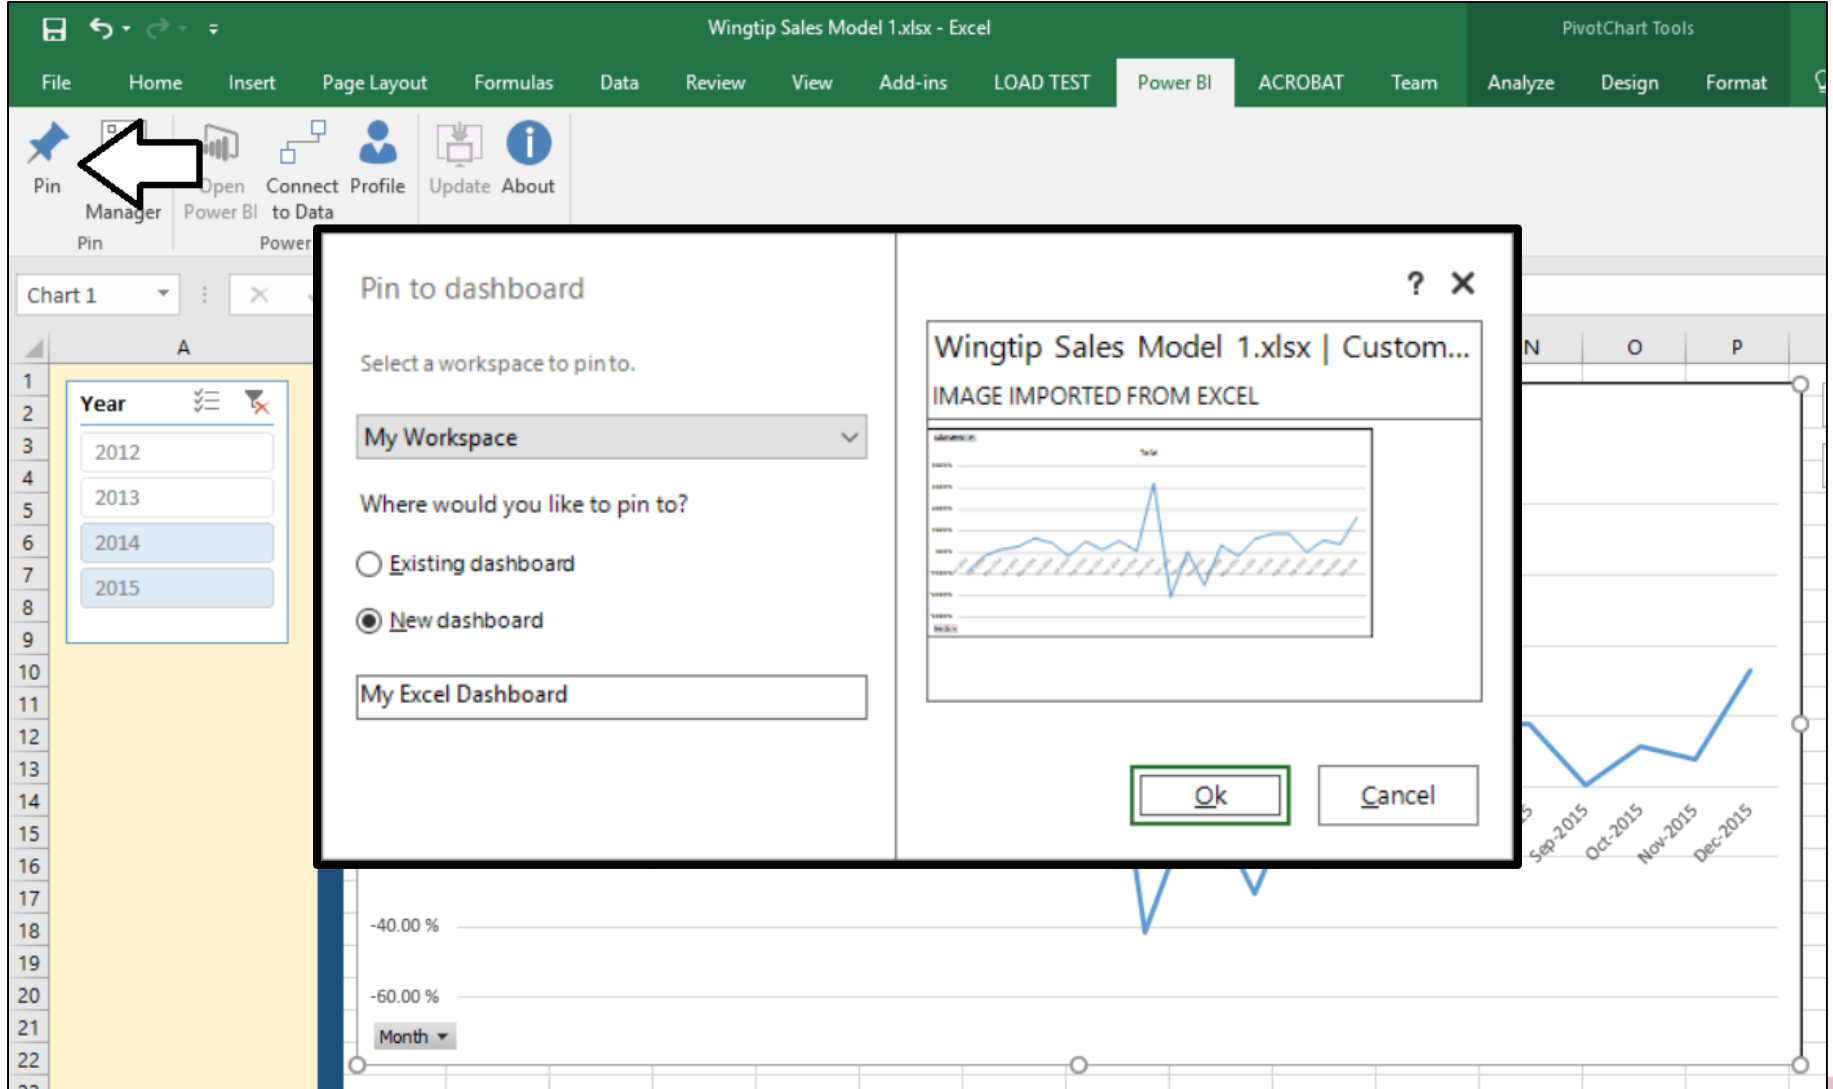

# Power BI Publisher for Excel Add-in

- What is the Power BI Publisher for Excel Add-in?
  - An add-in that you first must download and install
  - A utility to pin Excel elements to Power BI dashboard
  - Worksheet elements are pinned as non-dynamic snapshots
  - Pinned elements can be updated manually when needed

# Pinning an Excel Chart to a Dashboard

# A Pinned Excel Chart in a Dashboard

# Agenda

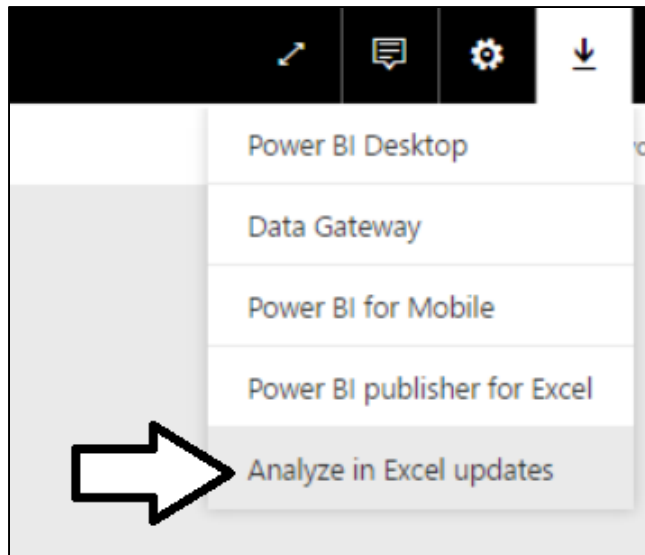

- ✓ Understanding Excel Integration with Power BI
- ✓ Designing Data Models in Microsoft Excel
- ✓ Connecting to Excel Data Models from Power BI
- ✓ Importing Data Models into Power BI Desktop
- ✓ Using the Power BI Publishing for Excel Add-in
- Connecting from Excel to a Power BI Dataset

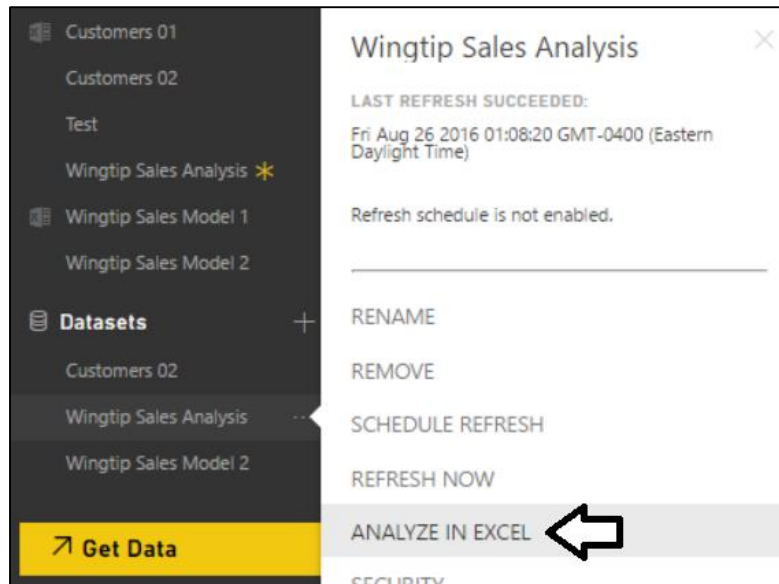

# Analyze in Excel

- Feature to connect Excel worksheet to Power BI dataset
  - Requires downloading & installing drivers using setup program
  - Once installed, connection is created from within Power BI service

# Creating a Connected Workbook

- Dataset provides ANALYZE IN EXCEL menu command
  - Used to create new Excel workbook with connection to dataset
  - Creation of new workbook triggered by download of **.ODC** file
  - Connecting can require user to enable data connections

# Analyzing a Power BI Dataset in Excel

- Once you connect Excel workbook to a Power BI dataset
  - You can analyze data just as it were from local data model
  - Power BI dataset plays the role of SSAS in the cloud
